Walkable cable tray system BKRS

Effective protection of supply cables and people
in industry

Foot-sure through day-to-day industrial operations

Walkable cable tray system BKRS

In the hard everyday industrial environment, materials must be able to withstand all kinds of loads. This also applies to electrical installations. Powerful protection against footfall, dust and many other loads is essential for reliably supplying the systems with power and data.
For these requirements, OBO offers its walkable BKRS cable tray system. The system is designed for the highest loads, which frequently occur in the vicinity of machines and automated production systems with robotic systems.

System sizes
The BRKS cable tray is available with the side heights 100 mm and 110 mm. The dimensions and materials mean that they satisfy the guidelines and requirements of numerous industries. Six different widths of 100 to 600 mm offer the right cable tray for any application purpose.

Safe power and data supply for industry

Automated production lines and systems construction applications consume very large quantities of energy and data, and hence require numerous cables. OBO walkable cable tray systems provide the ideal protection for these cables. The systems are tested according to EN 61537 and have tested load capacities according to EN 50085-2-2 and guarantee extremely high load capacities and safety in industrial environments.

OBO
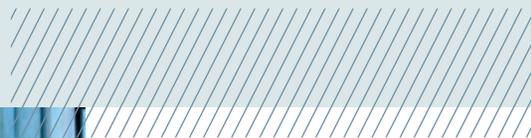

Cable trays made by OBO

OBO cable support systems stand out through their high level of variability and quality. The material, processing and galvanisation are the guarantees of first-class products. We pay particular attention to this in the production of our cable support systems.

At the head office in Menden, around 18 million metres of cable support systems are produced each year in an area of 30,000 m², of which around 10.5 million metres are cable trays, including the BKRS cable trays. The raw materials for this are subjected to strict quality controls even on arrival. Our employees review the material quality, surface structure and surface thickness in detail. Then each raw coil is given a label with all the key information, this is like an "identity card" which can be tracked through the entire production process. The amount of information increases with each production step and forms part of the continuous quality control process.

The BKRS cable trays are produced in two production steps, on the punching system and on the profiling system. Besides the quality checks before each production step, a camera in the punching system checks the function dimensions of the cable trays. The production of the chequer plate covers takes place primarily on the punching system. OBO Bettermann owns a product patent for the innovative production method used here.

The BKRS walkable cable tray system also complies with the in-house standards of a wide range of car manufacturers. For each product, OBO provides comprehensive documentation, including all data sheets and load capacity test reports. We also supply all necessary evidence confirming adherence to the automakers' safety specifications.

And we are working continuously on making our products and production processes even better – so that you can always rely on OBO quality.

Rugged connection

Heavy loads, stamping feet, dirt, dust – OBO's enclosed, walkable cable tray systems can handle all this and more, thanks to their ingenious system design. With their excellent mechanical stability, they offer effective protection for cables and lines. They all provide optimal shielding to ensure electromagnetic compatibility. Further information on page 9.

Comprehensive accessories

No matter whether a cover clamp as an alternative to the turn buckle, a cover lifter with a clever drilling template, a universal connector with inclusive edge protection or stand-offs for different mounting variants - the comprehensive accessories make the BKRS cable tray even better. Further information on page 16.

Functional equipotential bonding

The clamp spring and the connection terminal provide continuous functional equipotential bonding, without any additional drilling. Further information on page 16.

Anti-slip and displacement area

Sure-footed and slip-free with tested anti-slip (R11) and displacement area (V10) according to the applicable regulations for a lower accident risk at work. Further information on page 8.

OBO

Protected at every step and every turn

Anti-slip and displacement area

For risk-free working on walkable cable trays the anti-slip finish and sure-footedness of the covers are hugely important. The newly developed chequer plate design of the BKRS cover provides optimal slip-resistance for safe standing on the cover and minimises the risk of accidents in daily use.

The required classification is dependent on the place the cover is used and is described in BGR 181 "Floors in working areas with slippage risk" and ASR A1.5/1.2 "Technical rules for workplaces". The slip prevention of the covering surface is tested DIN 51130 "Testing of floor coverings - Determination of the anti-slip property" with the ramp test walking method. Here, the slip prevention is tested on a ramp with different angles of inclination from 6° > 35° and assigned according to the evaluation groups R9 (lowest requirements) to R13 (highest requirements). Most industries require slip protection of at least R10.

The DBKR chequer plate cover fulfils the requirements of BGR and ASR and with its certified anti-slip properties it is suitable for most environments that are walked on and have a risk of slipping.

If, due to the use of the building, extreme soiling with slippery substances (e.g. oils, animal fats, etc.) is to be expected, the surface must provide an appropriate displacement area for those substances in order to ensure that walking on the surface is safe.B.The specification is done using the designation "V" in connection with the index for the minimum volume of the displacement area. Here, the scale ranges from V4 (displacement volume: 4 cm³/dm²) to V10 (displacement volume: 10 cm³/dm²). In this respect, the BKRS chequer plate cover again supersedes the demands of most industries of V4 with a valuation group of V10.Hier reicht die Skala von V4 (Verdrängungsvolumen: 4 cm³/dm²) bis V10 (Verdrängungsvolumen; 10 cm³/dm²).

The advantages at a glance:

- Safe, anti-slip stepping on and off due to corrugation on the cover and cover edges
- Certified anti-slip class R11
- Certified displacement space class V10

Stronger together
Mechanical load capacity

Heavy loads, stamping feet, dirt, dust – OBO's enclosed, walkable cable tray systems can handle all this and protect cables against damage, thanks to their ingenious system design. They all provide optimal shielding to ensure electromagnetic compatibility. Through the use of a barrier strip, power, control and data cables are insulated according to DIN EN 50174, to ensure electromagnetic compatibility. The trays and covers themselves provide perfect all-round protection for the cables. Cable tray, cover and barrier strip have a continuous material thickness of 2 mm and are – when put together – highly stable.

In our in-house BET Test Centre, OBO simulates the loads that the walkable cable tray systems have to withstand on a constant basis. We determine the maximum load capacity and carrying capacity of the system, as well as its resistance to dust and corrosion. This means that, as a systems provider, OBO places paramount importance on safety.

The walkable cable tray system corresponds to the valid product standard IEC 61537 - Cable management, was tested according to all the relevant standards and, with the strip galvanised chequer plate cover, guarantees – depending on the installation type and subject to compliance with the mounting specifications – a footfall load of at least 350 kg according to EN 50085-2-2.
In order to ensure a safe maximum step load, the compartment size of 220 mm must be adhered to for the cable tray. This means, one barrier strip is sufficient for a tray width of up to 400 mm, two barrier strips need to be used for a width of up to 600 mm.

OBO

Mounting variants: Assembly options to meet every requirement

You can find further details in the mounting instructions for the walkable cable tray system.

Range of mounting options of the chequer plate cover

- Simple and rapid cover mounting with the new cover clamp
- Alternative mounting with turn buckle on flexibly chosen break-out openings
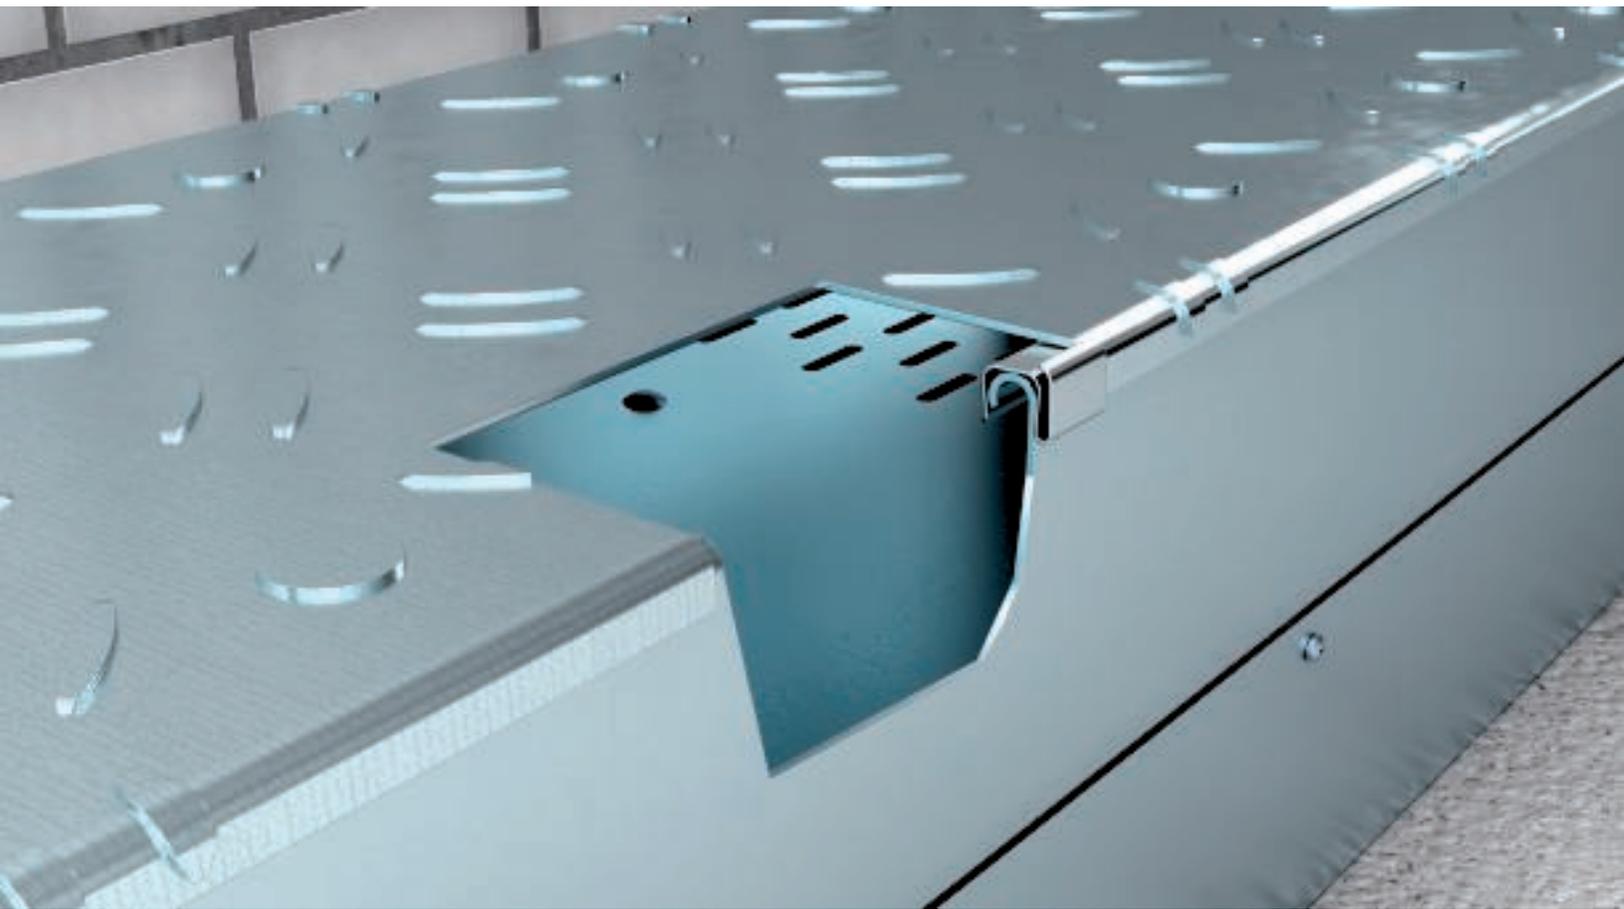

Mounting on support bracket

- Meets health and safety guidelines to avoid the risk of slipping/tripping
- Step height approx. 210 - 220 mm (depending on the system height)
- Space for routing under the system
- Prepunched protective panels simplify mounting on the support brackets

Mounting on Z-shaped support profile

- Step height approx. 210–220 mm (depending on the system height)

Mounting on Z support

- Max. system height 200 mm, fits under most protection fences
- Simple mounting of protective panels without additional drilling, thanks to prefabricated perforation in Z support and protective panel
- Space for routing underneath the system, meets health and safety guidelines to avoid the risk of slipping/tripping

Floor mounting

- Fastest and simplest way of laying and mounting the BKRS
- Low step height of 100 or 110 mm (depending on the system height)

Perfect protection

All kinds of conditions are encountered in modern industrial plants. Often the environment is harsh, with dirt, vibrations and other side effects of industrial processes posing a serious risk to sensitive power, data and control cables. BKRS provides a safe, enclosed installation space for cables and lines.

EMC-tested

Through the use of a barrier strip, power, control and data cables are insulated according to DIN EN 50174, to ensure electromagnetic compatibility. The trays and covers themselves provide perfect all-round protection for the cables.

Functional equipotential bonding

Flexible installation of equipotential bonding rails, earthing terminals and clamp springs for the optimal implementation of EMC concepts - made by OBO.

Dust protection

The dust protection elements on cover joints prevent the ingress of foreign bodies.

Continuously protected

Rapid, screwless integration of the BKR system into the functional equipotential bonding with KFL clamp spring and AKL connection terminal.

KFL clamp spring
• Just clamp onto the cable tray rail without needing to drill
• The conductor rope is pushed into the clamp spring to create the contact
• Max. conductor rope cross-section 35 mm²

Connection terminal AKL
• Simple creation of branches and exits of the conductor rope
• Available in single and double versions

KFL clamp spring

Components for functional equipotential bonding

With the KFL clamp spring and AKL connection terminal, the BKS system is included in the functional equipotential bonding, ensuring the electrical conductivity according to IEC 61537 - Cable management. The clamp spring is clamped onto the edge of the cable tray every 1,500 mm and guides the conductor rope along the cable tray. The system must be connected at least once with the functional equipotential bonding of the overall system. For this, the connection terminal on the clamp spring is screwed to the conductor rope. A contact to the overall system is created using the clamp spring. In addition, with the double version of the connection terminal, branches and exits of the conductor rope can be created.

Connection terminal AKL

Assembly options to meet every requirement

The comprehensive accessories for the BKRS cable tray offer a range of mounting benefits

The chequer plate cover not only offers ideal slip prevention, but can now also be mounted with the BKR cover clamp. As an alternative to the turn buckle, the cover clamp can be attached to the cover before mounting. The cover is then simply snapped onto the cable tray. Instead of pre-mounted turn buckle, there are break-out markings at 100 mm spacings on the chequer plate cover to allow mounting of turn buckles as appropriate.

With the matching cover lifter, the cover can be dismantled again just as easily. At the same time, the cover lifter can be used as a drilling template for connector perforations, for example to mount the RUVK universal connector.

One connector for every direction - the RUVK universal connector can be used as both a straight and angled connector. The optimised rounded inner edge of the connector reliably protects cables against damage during pulling.

At a glance:

- Cover clamp as the rapid alternative to mounting with turn buckles
- Cover lifter as dismantling tool with clever drilling template for connection perforation
- Universal connector with integrated edge protection when creating horizontal exits

RUVK universal connector

`0420` price/m

Chequer plate cover for the walkable cable tray system, type BKR.
The cover thickness is comprised of 2.0 mm of strip-galvanised sheet steel and 1.3 mm chequer height.
Pre-marked break-out openings at a spacing of 100 mm allow retroinstallation of a turn buckle.

When the cover is used under wind, draught or pressure impacts, additional security measures are required.

The covers are tested according to DIN51130 and possess anti-slip class R11 and displacement space class V10.

Cover fastenings are not part of the scope of delivery and can be ordered separately.

Cover clamp BKR

	FT	Hot-dip galvanised

Type		Pack Piece	Weight kg/100 pc.	Item no.
DRL H FT		20	2.187	6065012

`0420` /pc.

Single-sided turn buckle. Use for cover widths of 100–600 mm.

Turn buckle for additional installation or installation at a later date.

Depending on the cover version, dimension B varies as follows:
DRL / DRLU = 27 mm
DBKR = 27 mm
WDRL = 38 mm
WKLD = 58 mm

Turn buckle for screwing

	St	Steel
	FT	Hot-dip galvanised

DRL H S FT		20	3.260	6065018

`0420`

Single-sided turn buckle. Use for cover widths of 100–600 mm.

Turn buckle for additional installation or installation at a later date.

Depending on the cover version, dimension B varies as follows:
DRL / DRLU = 27 mm
DBKR = 27 mm
WDRL = 38 mm
WKLD = 58 mm

Cover lifter for chequer plate cover

St	Steel
FS	Strip galvanised

	Length	Width	Height		Pack	Weight	
Type	mm	mm	mm		Pair	kg/100 pairs	Item no.
DH DBKR FS	200	150	33		1	22.100	**6049285**

0420
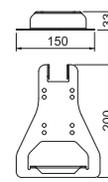

Using the cover lifter, chequer plate covers installed with cover clamps can be dismantled quickly and simply.

Position the cover lifter at pairs of the cover clamps and remove the chequer plate cover evenly. Repeat the operation in the lengthwise direction until the whole cover has been removed.

Alternatively, the cover lifter can be used as a template for the connector perforation with cable trays cut during construction. For this, turn the cover lifter through 180° and position on the cable tray. Then use the perforation template appropriate to the side height.

Dust protection element and joint plate

St	Steel
FS	Strip galvanised

0420 /pc.

Dust protection element for use between chequer plate covers and aluminium chequer plates for walkable BKRS cable tray systems, as protection against dust and chips, etc.
The component can alternatively be used as a joint plate in the walkable cable tray, to bridge construction interfaces.

Walkable cable tray systems, side height 100

Type	For metal thickness mm	Dimension h mm	Pack m	Weight kg/100 m	Item no.
KSB 4 PVC	1.5-4	15	10	15.000	6072895

0420 price/100 m

Edge protection strip with steel inlay to cover cut plate ends. Black, UV-resistant version.

Clamp spring for stranded cables

St	Steel
G	Electrogalvanised

Type	Cross-section mm²		Pack Piece	Weight kg/100 pc.	Item no.
KFL 25 G	25		50	1.731	6049273

0420

Functional equipotential bonding of the cable support system can be created with the clamp spring.
The clamp spring is clamped onto the edge of the cable tray and then the conductor rope is clamped into the intended support of the clamp spring.
The clamp spring can accept conductor ropes of up to 25 mm² and should be mounted every 1,500 mm.

Connection terminal, single

CuZn 37	Brass

Type	Cross-section mm²		Pack Piece	Weight kg/100 pc.	Item no.
AKL 25 E	25		10	5.808	6049276

0420

The connection terminal for the mounting of conductor ropes of up to 25 mm² is used for the creation of functional equipotential bonding of the cable support system.
The clamp is centrally screwed into the clamp spring.

Connection terminal, double

CuZn 37	Brass

Type	Cross-section mm²		Pack Piece	Weight kg/100 pc.	Item no.
AKL 25 Z	25		10	8.612	6049277

0420

The connection terminal for the mounting of conductor ropes of up to 25 mm² is used for the creation of functional equipotential bonding of the cable support system.
The clamp is centrally screwed into the clamp spring and can accept a further conductor rope of up to 25 mm².
The double clamp can be used as a junction for branches and cross-overs.

# Earthing terminal with fastening thread

CuZn 37	Brass
